GREEN GENERATIONS

2022-1-FR01-KA220-SCH-000085830

Final Newsletter: The End... or just the beginning?

Over the past two years, the GreenGenerations consortium has worked with passion, dedication, and a shared vision to promote sustainability through education across Europe.

Our mission has always been to bring strong EU-added value by supporting the development of a more cohesive and environmentally conscious European society.

At the heart of GreenGenerations is a simple yet powerful goal: to equip teachers with tools and resources to embed climate education in schools and communities through intergenerational learning.

We have created innovative, practical, and comprehensive educational tools to help teachers, students and their communities to develop eco-friendly habits, take meaningful action, and become responsible citizens of a greener future.

Multiplier Events: connecting and inspiring

One of the project's biggest highlights was the successful organization of multiplier events across partner countries - France, Greece, Bulgaria, Cyprus and Romania. These dynamic gatherings brought together teachers, education experts, local stakeholders, and families to share knowledge, exchange experiences, and celebrate the power of education in driving sustainable change.

From interactive workshops to real-life success stories, participants left energized and equipped to apply new strategies in their schools. Teachers praised the curriculum's clarity and relevance, while brainstorming sessions sparked creative new ideas for local initiatives.

The future is still green

Although the official project timeline is drawing to a close, our mission is far from over.

All GreenGenerations materials will remain freely accessible on our project website and the GreenGenerations platform.

We invite educators, schools, and communities across Europe to continue using, sharing, and building on them.

Together, we can keep the GreenGenerations spirit alive - fostering intergenerational climate education and growing a more sustainable future, one classroom at a time.

Thank you for being part of this journey. Let's keep the generations green.
